# AI Literacy

The ability to understand, evaluate, and responsibly use AI as tool.

AI is both a tool for accomplishing tasks and a source of information. We need to be literate in both respects.

# Stakeholders: Who values what?

## Students

### Values

- Efficiency and time savings
- Ability to probe/question freely
- Fairness
- Accuracy/reliability of results

### Concerns

- Efficiency and time savings
- Ability to probe/question freely
- Fairness
- Accuracy/reliability of results

## Educators

### Values

- Efficiency and time savings
- AI assistance
- Verify learning achievement
- Fairness/ transparency
- Relative control of AI in classroom
- AI Options

### Concerns

- Fairness (if AI used for grading)
- Being overly restrictive/permissive
- Unverifiable claims
- False positive accusations

## Administrators

### Value

- Efficiency and time savings
- Academic integrity
- Innovation
- Detecting AI-generated content
- Accountability

### Concerns

- Misapprehension/ misunderstandings of use
- Unverifiable claims
- False positive accusations
- Fairness of AI used for administration

# Misalignment Problem

## Scenario: Student Uses AI on essay

| Stakeholder | Priority |
|---|---|
| Student | Fairness/success |
| Instructor | Skill development/authorship |
| Administration | Integrity/Consistency |

Different legitimate priorities

An AI Literacy framework should be:

- Aware of stakeholder values
- Informed about value conflicts

# Who has what problems?

1. Misunderstanding/misuse of the tool
Overvaluing and misuse

2. Epistemic health:
Using AI can be epistemically harmful to knowledge production practices.

3. Mental health:
Using AI can be harmful to our mental health.

Why Treating AI Like A Human May Be Our Biggest Mistake

The more that people use AI, the more likely they are to overestimate their own abilities

News By Drew Turney published November 17, 2025

Researchers found that AI flattens the bell curve of a common principle in human psychology, known as the Dunning-Kruger effect, giving us all the illusion of competence.

**AI-fuelled delusions are hurting Canadians. Here are some of their stories**

'I went from very normal ... to complete devastation,' Ontario man says after 'AI psychosis'

**After the Algorithm**

A.I.-related psychosis has cost people their marriages, life savings, and grip on reality. But what happens next?

| Technical | Informational |
| --- | --- |
| **Model Design** | **Accuracy** |
| Consider model limitations | Evaluate accuracy of model output |
| **Model Functionality** | **Discipline/Field Relevance** |
| Discover model features | Disciplinary considerations |
| **Privacy & Trust** | **Authorship** |
| Evaluate impact of AI use | Determine human input |

# Applying the Framework

## Authorship exercise

In what ways am I retaining authorship of research?

If using AI to assist with writing, create a log to track your ideas and intentions.

- What is my aim with this project?
- What ideas, arguments, or structure have I contributed independently?
- When have I used AI in this project and for what specific purposes (brainstorming, editing, outlining, etc.)?
- What parts of the work reflect my own understanding?
- When have I accepted AI suggestions without modification?
- Could I explain and defend this work without AI assistance?

# From AI Anxiety to Clarity

Our framework offers:

- Stakeholder understanding
- Clearer and more informed judgment
- Stronger Assignment Environments
- Healthier Learning Environments

In response to confusion, uncertainty, and inconsistency, AI literacy should help educators respond with clarity, not panic.
